## INTRODUCTION

The worm gears made by Chiaravalli Trasmissioni SpA are square and are considerably versatile for mounting. The machining of the components, carried out using numeric control machines, guarantees maximum precision for the restricted tolerances, producing a product that will remain reliable over time. The groups are constructed with aluminium casings from sizes 025 to 090, while the sizes 110 and 130 are made from cast iron.

All of the bodies are painted with RAL 9022 aluminium colour to protect the parts from aging and to give better protection against micro-blowholes that may be present in the aluminium.

The gears are supplied with at least one filling plug that is also used during testing to check for possible leaks. A connection flange allows two gears to be combined in order to obtain high gear ratios.

Four sizes of CHTPC pre-stage gears are available to pair with the gears; these are also constructed in aluminium and are painted like the worm gears.

All of the groups are supplied with a lubricant whose characteristics are described in the following table.

## LUBRICATION

	CHM 025/090	CHM 110/130			CHTPC
<b>Lubricant</b>	Synthetic	Mineral	Mineral	Mineral	Synthetic
<b>°C Ambient</b>	-25°C/+50°C	-25°C/+50°C	-5°C/+40°C	-15°C/+25°C	-25°C/+50°C

<b>AGIP</b>	TELIUM VSF 320	BLASIA 320	BLASIA 460	BLASIA 220	TELIUM VSF 320
<b>SHELL</b>	TIVELA OIL SC 320	OMALA OIL 320	OMALA OIL 460	OMALA OIL 220	TIVELA OIL SC 320
<b>IP</b>	TELIUM VSF	MELLANA OIL 320	MELLANA OIL 460	MELLANA OIL 220	TELIUM VSF

## LUBRICATION

The size 025 to 090 gears are supplied complete with synthetic oil and therefore do not require any maintenance. The size 110 and 130 gears are supplied with the quantity of mineral oil foreseen for the B3 assembly position. It is the client's responsibility to adapt the quantity of oil to the assembly position and in addition, to substitute the filling plug, supplied closed for transport reasons, with the one equipped with a hole attached to the gear. If the breather plug is not installed it may create internal pressure with a consequent leakage of oil from the oil seals. For the sizes 110 and 130 we recommend that the oil is changed after the running in period, approx. 300 working hours.

## QUANTITY OF OIL IN LITRES

## MOTOR MOUNTING FLANGES

Gears that are supplied with mounting flanges must be assembled with motors whose shaft and flange tolerances correspond to a "normal class" of quality in order to avoid vibration and forcing of the input bearing. Motors supplied by Chiaravalli guarantee that this requirement is fulfilled. For ease of consultation, the correspondence of the size of the B5 and B14 motor with the sizes of the shaft and the motor connection flange are shown in the following table.

Remember that, as the motor connection flanges are separate from the body it is also possible to have a shaft / flange combination that does not correspond to the table, e.g. 19/140, thereby offering adaptability for other non-unified models such as the brushless or direct current types.

MMF	056	063	071	080	090	100	112	132
<b>B5</b>	9/120	11/140	14/160	19/200	24/200	28/250	28/250	38/300

## EXAMPLE ORDER

<b>CHM</b>	<b>090</b>	<b>FA (5)</b>	<b>2 (5)</b>	<b>30</b>	<b>90 B14</b>	<b>V5</b>
------------	------------	---------------	--------------	-----------	---------------	-----------

If the motor is also required, please specify:

Size es. 90 L4

Power es. Kw 1.5

Poles es. 4

Voltage es. V230/400

Frequency es. 50 Hz

Flange es. B 14

N.B. From size 25 to 63 the gears are always supplied in the Universal position and can therefore be mounted in any position, from size 75 to size 130 if the position required differs from B3 it must be specified.  
 In particular, in the event that a gear in position B3 is to be mounted in positions V5 or V6, the bearing positioned in the upper side must be lubricated using suitable grease that ensures proper lubrication.  
 We have tested TecnoLubeseal POLYMER 400/2 grease.

1) see page 1

2) see pages 6 and 7

3) see page 9

4) see page 5

5) lack of instructions indicates that the gear is not equipped with an output flange.

\* The values marked have a slot instead of a hole, therefore the fixing centreline, value, may be within the range indicated, an intermediate value is recommended.

# CHTPC WORM GEAR WITH PRE-STAGE MODULE

## DESIGNATION CHTPC / CHM - CHME

TYPE	SIZE	i =	P.A.M.	MOUNT. POS
CHTPC	63	3	63B5	If supplied coupled with CHM or CHME types specify the position of these, when the pre-stage module is supplied by itself it is prepared for universal assembly.
	71	3	71B5	
	80	3	80B5	
	90	2.42	90B5	

## EXAMPLE ORDER FOR A CHTPC COUPLED TO A CHM OR CHME GEAR

CHTPC	90	CHM	110	i=242 (2.42x100)	PAM 90B5	POS.B3
-------	----	-----	-----	------------------	----------	--------

If the motor is also required, please specify:

Size	es. 90 L4
Power	es. Kw 1.5
Poles	es. 4
Voltage	es. V230/400
Frequency	es. 50 Hz
Flange	sempre B 5

N.B. From size 25 to 63 the gears are always supplied in the Universal position and can therefore be mounted in any position, from size 75 to size 130 if the position required differs from B3 it must be specified.

In particular, in the event that a gear in position B3 is to be mounted in positions V5 or V6, the bearing positioned in the upper side must be lubricated using suitable grease that ensures proper lubrication.

We have tested TecnoLubeseal POLYMER 400/2 grease.

<b>CHTPC 80</b>	19/200	19/160
<b>CHTPC 90</b>	24/200	24/160

## PINION ASSEMBLY INSTRUCTIONS

- 1) Assemble the spacer A (if necessary heat between 80° and 100° C) onto the driving shaft and block it with Loctite 638 for coaxial blockings
- 2) Insert the key B included in the kit
- 3) Assemble the pinion E (if necessary heat between 80° and 100° C) onto the driving shaft
- 4) Fix the washer F using the screw C
- 5) Assemble the oil seal D in the direction shown in the drawing
- 6) Insert the motor with the pinion, taking care not to damage the oil seal

Note: CHTPC pre-stage modul doesn't allow radial loads.

\* The size CHTPC 90 is fixed using a ring and dowel.

The choice of power installed is tied to the unification of the motors, therefore it is sometimes in exuberance compared to the gear; always verify the maximum torque indicated when making the selection and if in doubt please contact our technical office.

				1800			
				2400			

See page 4

For the motor mounting flanges (M.M.F.) see the table showing the types available.  
 For the executions see the table with drawings, if not specified OBS would be supplied.  
 The mounting position refers to the second gear.

**EXAMPLE ORDER**

<b>CHM/CHM</b>	<b>040/090</b>	<b>FA(5)</b>	<b>2(5)</b>	<b>500</b>	<b>OAD</b>	<b>63 B14</b>	<b>V5</b>
----------------	----------------	--------------	-------------	------------	------------	---------------	-----------

If the motor is also required, please specify:

- Size es. 63 B4
- Power es. Kw 0.18
- Poles es. 4
- Voltage es. V230/400
- Frequency es. 50 Hz
- Flange es. B 14

N.B. From size 25 to 63 the gears are always supplied in the Universal position and can therefore be mounted in any position, from size 75 to size 130 if the position required differs from B3 it must be specified.  
 In particular, in the event that a gear in position B3 is to be mounted in positions V5 or V6, the bearing positioned in the upper side must be lubricated using suitable grease that ensures proper lubrication.  
 We have tested Tecnolubeseal POLYMER 400/2 grease.

- 1) see page 17
- 2) see page 9
- 3) see page 5
- 4) see page 16
- 5) lack of instructions indicates that the gear is not equipped with an output flange.

# EXECUTION

OAD

OAS

OBD

OBS

VAD

VAS

VBS

VBD

The execution determines the mounting position of the first gear in relation to the second gear. If not otherwise specified at the time of order, the group will be supplied in the OBS execution. The placing position refers to the second gear.

N.B. The powers marked with an asterisk are higher than those that the gear allows, therefore the applicative choice must be made in accordance with the torque and not the power.

The gear ratios are those most frequently requested. It is possible to obtain multiple combinations using the various ratios of the two single gears.

- Motors with cage rotor, closed with external surface ventilation.
- Design, construction and testing in conformity with the standards CEI2-3, international standards IEC 34-1 and the main foreign standards.
- Power-sizes in accordance with the standards IEC 72, national standards UNEL-MEC.
- Insulation class F
- Protection IP55
- S1 Continuous service

- European Directive ROHS 2002/95/CE
- NSK or SKF Bearings
- Phase separators
- 2-pole and 6-pole motors available
- Kit of feet available
- Forced ventilation kit available for single-phase and three-phase models

# RADIAL LOADS ON THE OUTPUT SHAFT

## RADIAL LOADS ON THE OUTPUT SHAFT

The loads indicated are valid for all application directions.

The maximum allowable axial loads are equal to 1/5 of the radial load value shown in the table when applied with the same radial load; if this is not the case, please contact our technical office. If double output shafts are used, the sum of radial loads applicable to the centre lines of the two ends of the shaft must not exceed the value shown in the table below.

The radial loads related to the output speed (n<sub>2</sub>)=10 are the maximum loads supported by the gear.

- a** • Gear constant
- b** • Gear constant
- x** • Load distance from shaft shoulder in mm.
- Fr<sub>x</sub>** • Radial load in position x (in N)
- Fr** • Radial load (N)
- Fa** • Axial load (N)

# Use and maintenance instructions

## INSTALLATION

- The data shown on the identification name plate must correspond to the gear ordered
- The oil level, for the sizes 110 and 130 equipped with filling, draining and level plug, must correspond to the quantity foreseen for the assembly position requested (see catalogue), in addition, always for the sizes indicated, it will be the client's responsibility to substitute the blind plug, supplied for transport, with the corresponding plug equipped with a bleed hole included in the supply with the gear
- All of the other gears are supplied complete with permanent synthetic oil in a quantity that is sufficient for any assembly position
- The gear must be fixed on a flat surface that is sufficiently rigid in order to avoid any vibration
- The gear and the axis of the machine to be driven must be perfectly aligned
  - o In the event that knocks, overloading or blockage of the machine are foreseen, the client must install a limiting device, joints, overload cut-out etc.
- Coupling with pinions, joints, pulleys and other parts must be done after the parts have been cleaned and knocks should be avoided while assembling as they could damage the bearings and other internal parts
- In the event that the motor is supplied by the client, he must check that the flange and shaft tolerances correspond to a "normal" class; our motors satisfy this requirement
- Check that the fixing screws for the gear and the related accessories are correctly tightened
- Take suitable measures to protect the groups from any aggressive atmospheric agents
- Where foreseen, protect rotating parts from any possible contact with the operators
- If the gears are painted, protect the oil seals and the machined surfaces
- All of the gears are painted RAL 9022 grey

## OPERATION AND RUNNING-IN

- To obtain the best performance the gears must first be run-in by gradually increasing the power in the first few hours of operation, in this phase an increase in temperature is considered normal
- In the event of defective operation, noise, oil leakage, etc. stop the gear immediately and, when possible, remove the cause. Alternatively, send the piece to our factory to be controlled.

## MAINTENANCE

- The worm gears from size 25 to size 90 and the pre-stage modules are lubricated with permanent synthetic oil and therefore do not require any maintenance
- The gears size 110 and 130 are lubricated with mineral oil and are equipped with a breather plug, therefore the oil level must be checked periodically and if necessary topped up with the same oil or one that is compatible with those indicated in our catalogue
- For the gears size 110 and 130 proceed with the substitution of the oil after the first 300 working hours, replacing it with the correct quantity in accordance with the assembly position, as detailed in our catalogue, after the inside of the gear has been thoroughly washed

## WAREHOUSE STORAGE

- If the warehouse storage will be for a long time, more than 3 months, the shafts and machined surfaces should be protected using antioxidants and the oil seals should be greased

## HANDLING

- Care must be taken not to damage the oil seals and the machined surfaces when handling the groups

## DISPOSAL OF PACKAGING

- The packaging in which our gears are delivered should be sent to specialised companies for recycling if possible.

# GENERAL SALES CONDITIONS

1) ORDERS – Orders for special and standard material must always refer to offers made by CHIARAVALLI Trasmissioni SpA.

The orders are binding for the client. Once work has commenced no cancellations or order reductions will be accepted unless the client reimburses the costs of the material and the work carried out up to the moment in which the order was suspended. The quantity despatched can vary by  $\pm 5\%$  compared to the quantity ordered.

2) PRICES – The prices are those in force at the date of order. All prices are for goods delivered ex-works Premezzo, packing excluded. If there should be any increase in production and material costs over the duration of the supply, CHIARAVALLI Trasmissioni SpA reserves the right to adapt the prices accordingly, even for orders in course.

3) TERMS OF DELIVERY – Only the terms of delivery indicated by CHIARAVALLI Trasmissioni SpA are to be considered valid. However, they must only be considered as indicative. In the event of difficulty in the procurement of materials, strikes or in any event in all cases of force majeure, the terms of delivery will be automatically extended without CHIARAVALLI Trasmissioni SpA having to pay any reimbursement for damages. The client is obligated to collect special material ordered when ready.

4) DELIVERIES – Deliveries are the responsibility of the purchaser and are carried out at his own risk and peril. Any claims for shortages must be presented within 8 days of receipt of the goods. If it is agreed that the cost of transport is to be paid, even if only in part, by CHIARAVALLI Trasmissioni SpA, the latter reserves the right to choose the most economical means of transport.

5) PACKING – Packing will be invoiced at cost.

6) RETURNS – No returns for any reason will be accepted unless previously authorised and with packing, any customs clearance and the return paid for by the purchaser. To cover warehouse and administrative expenses a debit note will be issued for approx. 15% of the value of the goods returned.

7) WARRANTY – CHIARAVALLI Trasmissioni SpA promises to repair or substitute free of charge any parts that they recognise as being defective. The questioned goods must be returned to the factory of CHIARAVALLI Trasmissioni SpA, free of all expenses. The warranty will be considered cancelled in the event that the parts returned as defective have been repaired or tampered with. The repair of defective parts carried out by the purchaser will only be accepted after authorisation from CHIARAVALLI Trasmissioni SpA and after their approval of the cost estimate. CHIARAVALLI Trasmissioni SpA does not accept responsibility or pay any reimbursement for damages that occur during the use of their products, even if defective.

8) RESPONSIBILITY – CHIARAVALLI Trasmissioni SpA does not accept responsibility or pay any reimbursement for damages that occur during the use of their products, even if defective. CHIARAVALLI Trasmissioni SpA declines all responsibility in the execution of parts to a client's design under any patents.

9) PAYMENTS – Only payments carried out in the manner and terms agreed will be considered valid. Once the due date of payment has passed, CHIARAVALLI Trasmissioni SpA will calculate the interest on delayed payment at a rate that is 3% higher than the legal one, retaining the right to demand payment. In the event of delayed or missing payment by the purchaser, the company CHIARAVALLI Trasmissioni SpA reserves the right to suspend deliveries of the orders in course or to demand advance payment without having to pay any reimbursement or compensation to the purchaser. Any dispute regarding materials in manufacture or already possessed by the purchaser does not free the latter from the commitment of making the payment by the agreed date and for the whole amount of the invoice without making any deductions.

10) OWNERSHIP – All of the goods despatched remain the property of CHIARAVALLI Trasmissioni SpA until the invoice is fully paid.

11) COMPETENT COURT – Any controversy concerning business relations with CHIARAVALLI Trasmissioni SpA will be dealt with under the jurisdiction of the Court of Busto Arsizio.
